

VHA Vapor/Humidity Absorbant

Icon's Vapor/Humidity Absorbant is a unique blend of materials that absorb free fuel and fuel additive vapors, humidity, and vapors encapsulated in humidity that become the basis for corrosion in a sump.

FEATURES & BENEFITS

- Significantly reduces the corrosive environment in a sealed sump
- Effective for a 2-3 month period for common sizes of sealed sumps
- Disposed of in the same manner acceptable for dispenser fuel filters
- Minimal cost and easily applied for an effective corrosion preventive solution
- Highly effective in combination with Icon PetrolSeal sealant coating over the STP
- Simply hang the bags over the STP, and remove when indicator shows complete saturation

It is important to keep water out of a sump, but even when sealed and leak free, the sump environment is subject to vapor releases and ambient humidity which combine and condense on the submersible tank pumps and other equipment inside a sump causing corrosion. Also, ethanol fuel vapors add food for microbial elements that have proven to be a major contributing cause of corrosion.

PARTS & PRICES

VHA200	Vapor/Humidity Absorbant, Two - 1 lb bags	\$35.00
VHA400	Vapor/Humidity Absorbant, Two - 2 lb bags	\$60.00
